DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, drawn to a composition consisting of water, sodium formate, sodium tripolyphosphate, sodium xylene sulfonate, protease and amylase, classified in class 510, subclass 393.
 - II. Claims 15-34 drawn to a composition comprising a solvent, enzyme stabilizer, buffer, carbonates, sulfides, hydrotropic nonionic surfactant and compounds to remove protein and carbohydrate materials, classified in class 510, subclass 393.
 - III. Claims 35-45 drawn to a method of making a nontoxic cleanser by mixing the solvent, enzyme stabilizer, buffer, hydrotropic nonionic surfactant and compounds to remove protein and carbohydrate materials until all solids are dissolved, classified in class 510, subclass 393.
 - IV. Claims 46-49 drawn to a method of cleaning instruments and equipment comprising immersion/application and rinsing after cleaning, classified in class 510, subclass 393.
 - V. Claims 50-72, drawn to a composition comprising water, sodium formate, sodium tripolyphosphate, sodium xylene sulfonate, protease, amylase, and a nonionic surfactant, classified in class 510, subclass 393.
 - VI. Claims 73-81 drawn to a method of making a non-toxic cleanser by mixing solvent, enzyme stabilizer, buffer, hydrotropic nonionic surfactant,

protease, amylase, nonionic surfactant, solubility improver, hydrotropic anionic surfactant, sodium borate decahydrate, and propylene glycol in batches, classified in class 510, subclass 393.

2. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06).

In the instant case, groups I, II and V are unrelated since the 3 different inventions are 3 different compositions consisting of different components.

Groups III and VI are unrelated since the 2 different inventions are 2 different methods of mixing 2 sets of different ingredients to make at least 2 different nontoxic cleaning compositions.

Inventions III and IV are related as process of making and process of using the product. The use as claimed cannot be practiced with a materially different product. Since the product is not allowable, restriction is proper between said method of making and method of using. The product claim will be examined along with the elected invention (MPEP § 806.05(i)).

3. Because these inventions are independent or distinct for the reasons given above and the inventions have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1751

4. A telephone call was made to James Hiney on June 8, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
